**Abstract**—This report goes over the various panorama stitching techniques discussed in the course project. We go over the methodology, ideas, and implementation of stitching techniques. In phase 1, we use a traditional feature-matching approach to stitching. In Phase 2, we implement supervised and unsupervised deep learning approaches to estimate the homography between two images and blend them.

## I. INTRODUCTION

This demo file is intended to serve as a “starter file” for IEEE conference papers produced under L<sup>A</sup>T<sub>E</sub>X using IEEE-tran.cls version 1.8b and later. I wish you the best of success.
